

Management of the coastal zones

"SUSTAINABLE MANAGEMENT OF COASTAL ZONES"

The coasts are the natural crossroads between human activity and the sea. Here is where migration of the population is discouraged on the coasts, less fishers prevent overfishing, sewage and other wastes are discharged far away in lagoon, foreign vessel stay outside EEZ, illegal fishing is not allowed, zoning prevents conflicts, erosion and pollution reduced by trees and terraces, mangrove declared as conservation area and MPA protects biodiversity.
